DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dusterhoft (US PgPub 2002/0062161). Dusterhoft teaches a method and apparatus for a free expansion (see Figs. 2 and 7).

Dusterhoft does not teach the specifically claimed temperature function. It is generally well known in the art that temperatures above the glass transition temperature must be reached in order to form the desired finished product. It would have been obvious to a person of ordinary skill in the art at the time of the invention to use generally well known molding techniques, or routine experimentation, to modify the method taught by Dusterhoft and heat the container to temperatures above the glass transition temperature in certain locations thereon. This would allow for deformation more quickly and easily.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Stark (US Patent 3,331,902).
